MORE ABOUT MY EXPERIENCE

2012-2016

University of Tennessee

I studied interior architecture at the University of Tennessee in Knoxville, TN. During this time, I engaged in a comprehensive exploration of design principles, spatial aesthetics, and the integration of functionality and storytelling. The program provided a dynamic platform for honing my natural creative skills, while fostering a deep understanding of interior architecture's nuances, and shaping my perspective on creating well-crafted and purposeful spaces.

2018-2020

UI UX Design

In 2018, my interest in graphics took me to explore the intersection between technology and human experience through UI/UX Design. This exploration has opened my eyes to how the user experience is vital no matter which platform in which you're using. I have a constant desire to create real-world impacts, to shape environments and products that can be touched, felt, and experienced.

2016-2018, 2020-Current

Interior Design

Interior design is an intimate, powerful way to convey a story. My dedication to conceptual interior design extends beyond the surface, delving into the psychological impact of spatial arrangements, lighting, and materials. In essence, my passion for conceptual interior design is a fusion of creativity, storytelling, and a deep appreciation for the profound impact that well-crafted environments can have on individuals and communities.

INTERIOR DESIGN

PROFESSIONAL WORK

Private Island Residence

Parcel 01 / 12 - "The Armory"

2024-2025

As one of the lead interior designers on the development on this project, I was responsible for the design development and documentation of two (of twelve) destinations being constructed on a private island in the Red Sea for a high profile client. The spaces highlighted on the following pages include the Main Lounge and the Client Suite. This approximately 90,000 sq ft private island destination features five lounges, a custom bedroom suite, two private lounges, two guest suites, a pizza kitchen, an arcade, a bowling alley, an outdoor sentinel dining area, an outdoor terrace, an outdoor servery, three gaming rooms, two foyers, two front-of-house stairways, two front-of-house elevators, and a private elevator. The design concept of this part of the island draws inspiration from the site's historic use as an armory. The material palette reflects this narrative by pairing natural, locally sourced materials—such as coral stone, plaster, and aged teak—with industrial elements like core-ten steel, iron, and aged hardwoods reminiscent of traditional weaponry.

Komune Retail Space

Retail TI Build-out : 750 sq ft

2024-2025

Komune is a new fashion brand based in New York City, featuring in-house designs and a curated, partially rotating selection of emerging designers. This year, they opened their first storefront, which I co-designed with a colleague, my husband (an architect), and the Komune team—from schematic design through construction and ongoing artist pop-ups in the space.

Tech Showroom & Office

TI Build-out : 50,000 sq ft

2022-2024

This project is for a global company that offers healthcare products and services. The goal is to design + build their first USA-based showroom to exhibit their medical equipment while telling their brand story. This design is in collaboration with experiential designers.

Academy of Country Music

Office TI Build-out : 8,400 sq ft

2020-2022

Academy of Country Music relocated from Los Angeles to Nashville, TN. The design of the new Nashville headquarters honors outlaw country music originating from ACM artists like Willie Nelson and Merle Haggard in the 1960s. This project required interior design conceptual development, design development, & construction documents.

Hyatt-Caption | Nashville, TN

Brand Standard Hotel

2021-2023

This project introduced the new Hyatt Caption brand to Nashville and marked only the second location built in the United States. The first property, in Memphis, TN, was nearing completion as we began schematic design for the Nashville site. Because the initial brand standards were presenting constructability challenges, our team was asked to reinterpret the standards—maintaining the spirit of the brand while infusing the character and energy of downtown Nashville.

Ultimately, the design evolved even further from the original brand guidelines, but the concept presented here reflects my initial interpretation. We preserved the brand-standard finishes and layered in decorative lighting and custom entry signage inspired by the Gulch, the vibrant neighborhood surrounding the hotel. As a lifestyle brand centered on authentic, local connection, Hyatt Caption emphasizes communal engagement. To support this, I arranged the furniture to encourage interaction between different groups, selecting flexible, adaptable pieces to enhance the experience for all guests.

UI /UX DESIGN

Building Infrastructure UI / UX Design

Proprietary Software for Building Automation

2019-2021

DesigoCC is a software designed to monitor & adjust mechanical, fire, and security functions as easy and efficiently as possible for any property now matter how large. I was promoted to UX Designer II after one year and played a continual role in the development of the Siemens standards interface with every version update.

MISCEL- LANEOUS

IIDA Threads

Competition

2023

IIDA Threads is an annual fashion show where firms pair with material manufacturers to design an outfit based on a design theme. This year, we were paired with Mohawk carpet and the themes were different visual artists. Our team was assigned the artist, Georgia O'Keefe. We were awarded best Audio Visual.

UNI VERSITY WORK

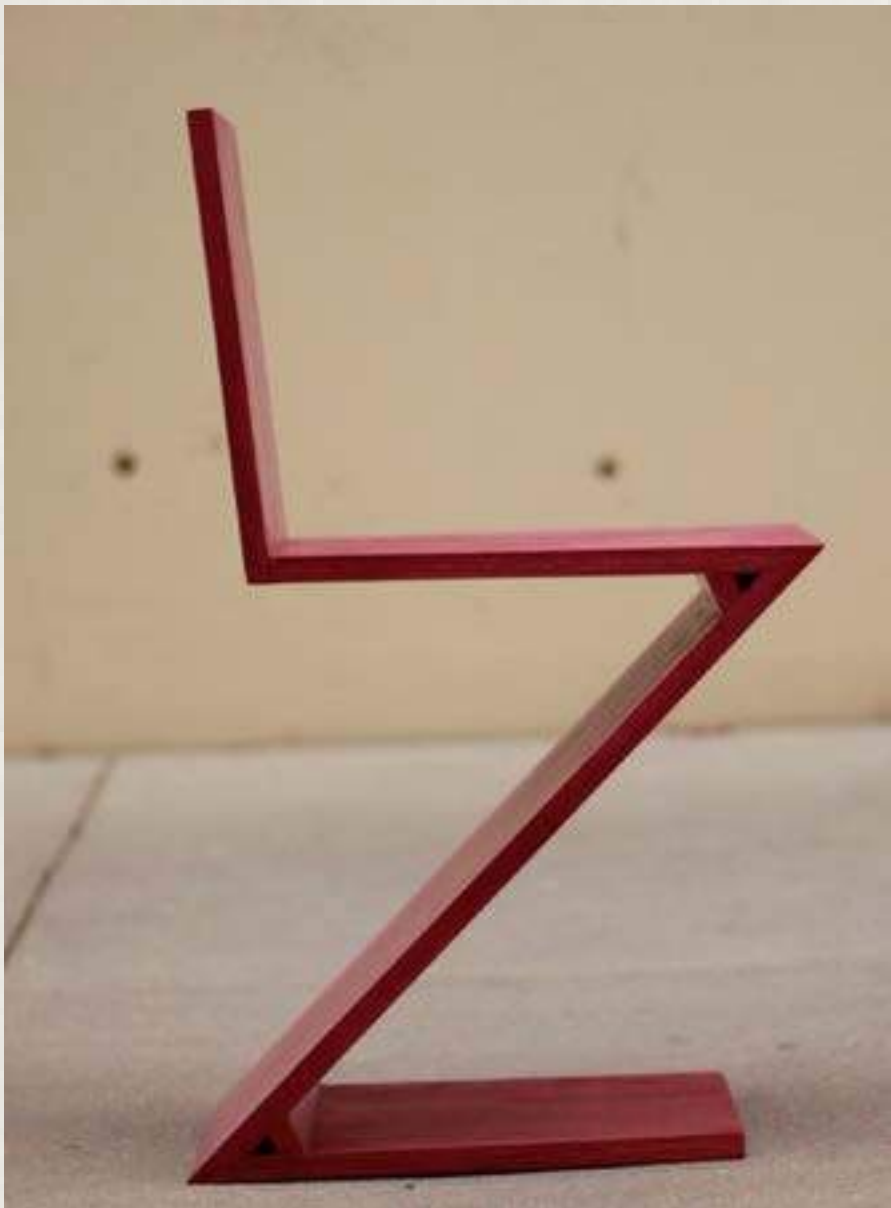

Furniture Study & Build

Zig-Zag Chair

2016

To study the construction of furniture, I selected and built an existing furniture design from raw lumber. I selected the Zig-Zag Chair by Gerrit Thomas Rietveld because of its seemingly physics-defying form. This chair is constructed of red oak with a custom stain made by combining oil paint and mineral spirits.

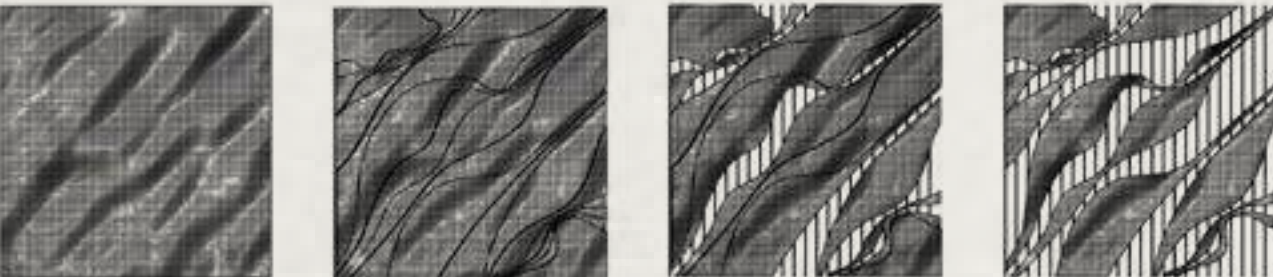

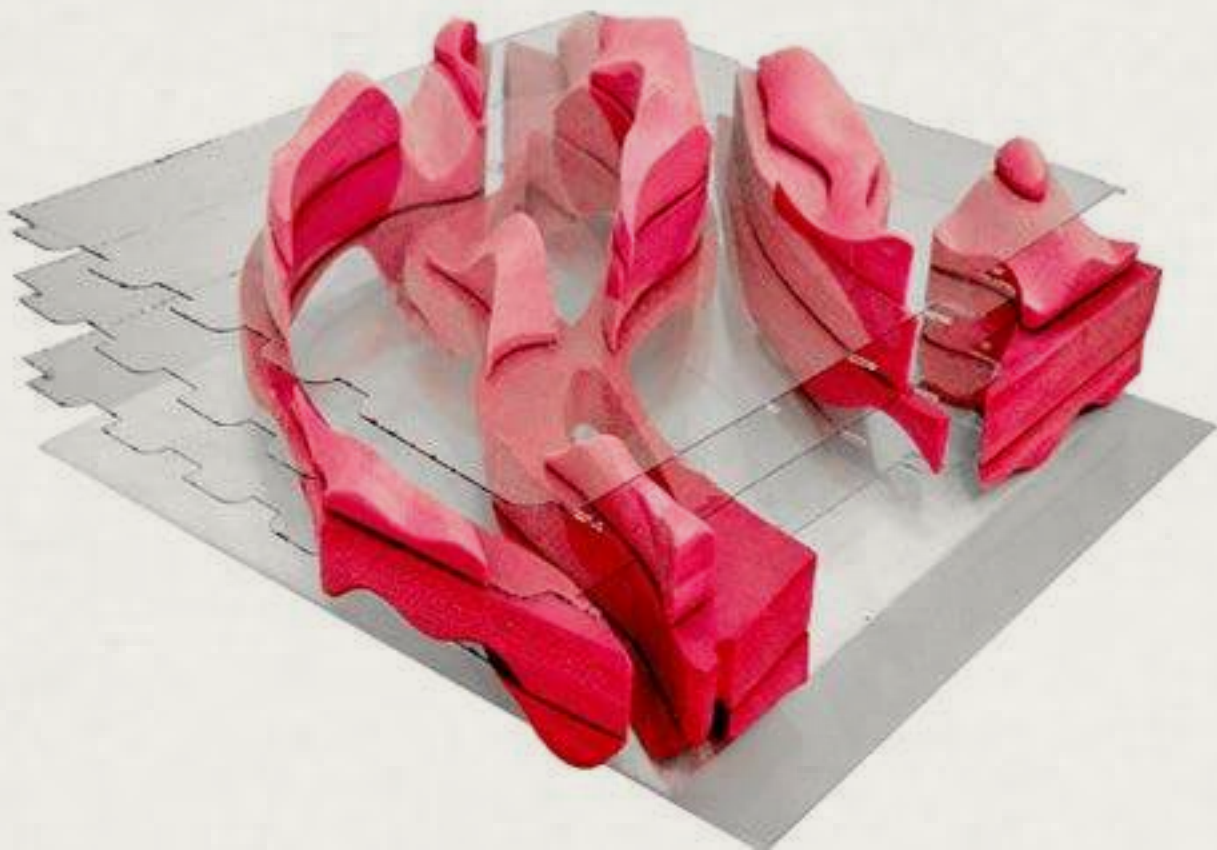

Derivative Trails

Material Design, ADA-Focused, Reuse Renovation

2016

Project Overview
Re-imagining the downtown public library in Knoxville, TN as a school for the blind. We visited the School for the Blind in Nashville, TN to understand how students navigate their school through tactile materials, form & light-level adaptability.

Research Findings
The overall findings were that material changes & texture really help with wayfinding, since the students keep their hand on the wall when walking. A majority of the visually impaired can still see light to some extent, so the ability to adjust light levels is a must. The students said the biggest disadvantages were ramps or any change in elevation. Inconsistent elevations throw off ones' sense of balance with the absence of sight.

THANK
YOU!
